Syed M. Danial Raza Naqvi

Full Stack Engineer | AI & LLM Integration | SaaS & Geospatial Platforms

Lahore, Pakistan · danialsyed66@gmail.com · +92 337 040 7835 · danial-syed.netlify.app · linkedin.com/in/danial-syed-7897174b

PROFESSIONAL SUMMARY

Full Stack Engineer with 3.5+ years shipping production SaaS platforms, AI/LLM-powered features, and large-scale geospatial applications across 5+ client products. Experienced end-to-end: API architecture, RAG pipelines, frontend performance, Stripe billing, and cloud automation across geoscience, insurance, e-commerce, and AI-assisted sales training.

SKILLS

Languages: JavaScript (ES2022+), TypeScript, Python, SQL
Frontend: React, Next.js 13+ (App Router), TailwindCSS, Material UI, DeckGL
Backend: Node.js, NestJS, GraphQL, FastAPI, REST APIs, Azure Functions, AWS Lambda
AI / LLM: RAG pipelines, Pinecone, Chainlit, OpenAI API, prompt engineering
Databases: MongoDB, PostgreSQL, ElasticSearch, MySQL
Geospatial: Mapbox GL JS, Google Maps API, DeckGL, spatial query optimization
Payments & DevOps: Stripe (subscriptions, webhooks, payouts), Azure DevOps, AWS, Git, CI/CD

EXPERIENCE

Software Engineer · MergeStack, Lahore · Sep 2022 – Present

- Shipped features end-to-end across **5+ enterprise SaaS products** in geoscience, insurance, and e-commerce — owning API design, frontend UI, and cloud deployment.
- Integrated AI/LLM capabilities into **3 production platforms**, including conversational agents, RAG pipelines over PDFs, and AI risk-scoring logic that reduced manual decision-making.
- Restructured GraphQL resolvers and optimized MongoDB and PostgreSQL queries across **3+ high-traffic APIs**, measurably cutting response times and improving frontend performance.
- Migrated a high-traffic e-commerce app from Next.js Pages Router to App Router (v13+), reducing JS bundle size and achieving green scores across all **3 Core Web Vitals** metrics.
- Wired Stripe subscription billing, webhook-triggered payouts, and tiered plan management across **3+ SaaS platforms**, enabling fully automated revenue collection and disbursement.
- Scaled geospatial rendering to handle **millions of records** using Mapbox GL JS, DeckGL, and ElasticSearch, including a custom Kepler.gl-style layer management system.
- Configured Azure Functions and AWS Lambda to process large-scale data jobs on schedule, eliminating **100% of manual intervention** for ingestion and background workflows.

KEY PROJECTS

M1neral — *Geoscience Data Visualization Platform · Company*

- Architected a Mapbox GL JS + DeckGL platform for **oil & gas datasets with millions of geological records**, featuring Kepler.gl-style layer management and a virtualised table rendering tens of thousands of rows without degradation.
- Shipped a RAG chatbot (Pinecone + OpenAI) over agreement PDFs enabling users to query data and trigger **3 categories of in-app actions** — layer creation, styling updates, and data source Q&A — via natural language; added Azure Functions for OCR document indexing.

Stack: *React, Next.js, NestJS, GraphQL, Mapbox GL JS, DeckGL, MongoDB, ElasticSearch, Azure Functions, OpenAI, Pinecone*

Centinel — *Grid Outage Insurance SaaS · Company*

- Launched a B2B insurance platform that automates the full claims lifecycle in **3 steps**: outage detected → email survey dispatched to affected businesses → payout released via SnapRefund, with zero manual intervention.
- Deployed AI risk-scoring models and plan-cap logic per location to prevent policy oversaturation in high-risk zones; integrated Stripe subscription tiers covering **end-to-end billing and automated disbursement**.
- Authored the outage detection service and email survey dispatch system, enabling **fully automated client confirmation flows** without any manual outreach from the operations team.

Stack: *React, Next.js, NestJS, PostgreSQL, Stripe, SnapRefund, OpenAI*

Sales Rep AI — *AI Sales Training Chatbot · Company*

- Launched a RAG-powered training assistant (Pinecone + OpenAI) over proprietary PDFs, enabling new reps to complete **self-serve onboarding without 1:1 senior sessions** — cutting training overhead significantly.
- Implemented FastAPI auth routes, Chainlit conversation management, and a Stripe freemium model (**first month free, then recurring paid subscription**) that converts trial users into paying customers.

Stack: *Python, FastAPI, Chainlit, Pinecone, OpenAI, Stripe*

Perigon AI — *Geospatial Store Intelligence Platform · Company*

- Designed a NestJS + GraphQL backend with optimized PostgreSQL spatial queries for low-latency map rendering across **large multi-region store datasets**; released a no-code Admin Panel Layer Module for non-technical ops teams.
- Overhauled bulk dataset ingestion to support large-volume uploads, enabling near-real-time on-map analytics for **territory planning and store operations**.
- Integrated Google Maps API with custom marker clustering and boundary overlays across **multiple geographic regions**, improving store discoverability and territory coverage visibility.

Stack: *React, NestJS, GraphQL, PostgreSQL, Google Maps API, TailwindCSS*

Zenleaf Dispensary — *Large-Scale E-Commerce Platform · Company*

- Spearheaded Next.js 13 App Router migration across **3+ storefronts**, reducing JS bundle size and achieving measurable gains on LCP, TTFB, and FID scores.
- Executed an SEO overhaul — structured data, metadata strategy, dynamic sitemaps — lifting organic rankings on **2+ storefronts within the first post-launch quarter**; produced a TailwindCSS component system that eliminated redundant UI code across all store variants.
- Engineered a store-based component architecture in TailwindCSS used across **multiple storefronts**, cutting time-to-launch for new store variants and reducing front-end duplication by a significant margin.

Stack: *Next.js 13+, React, TailwindCSS, Node.js, MongoDB*

EDUCATION

BS Computer Science · COMSATS University, Lahore · Sep 2018 – Aug 2022

- Final Year Project: Full-stack MERN application — end-to-end delivery from database schema to deployed, user-tested interface.
