Syed M. Danial Raza Naqvi

Senior Full-Stack Engineer | AI & LLM Products | Geospatial & Data-Heavy SaaS

+92 337 040 7835 · danialsyed66@gmail.com · danial-syed.netlify.app · linkedin.com/in/danial-syed-7897174b

Lahore, Pakistan · github.com/danialsyed66

PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with 4+ years building production SaaS across oil & gas, parametric insurance, freight logistics, retail location intelligence and e-commerce. Top individual contributor in 19 of 21 client repositories and founding engineer on two platforms; leads builds across four client products and mentors the engineers on them. Works across geospatial interfaces (Mapbox GL JS, deck.gl, PostGIS, ElasticSearch), AI/LLM features (document extraction, RAG, usage-based billing) and back-end systems for authorization, idempotent payments, signed webhooks and bulk data imports. TypeScript and Python, on AWS and Azure.

SKILLS

Languages: TypeScript, JavaScript (ES2023), Python, SQL
Frontend: React 19, Next.js (App Router), Vite, TanStack Query/Table/Virtual, Tailwind CSS, shadcn/ui, Material UI
Backend: Node.js, NestJS, Django REST Framework, FastAPI, GraphQL (Apollo), REST APIs, Azure Functions, AWS Lambda
AI / LLM: OpenAI API, LangChain, RAG pipelines, Pinecone, structured-output extraction, Chainlit, OpenTelemetry, AI-agent workflows
Data: MongoDB, PostgreSQL + PostGIS, SQL Server, Redis, ElasticSearch, DuckDB + Parquet, BullMQ
Geospatial: Mapbox GL JS, deck.gl, Google Maps API, Turf.js, GeoJSON / WKT / shapefiles, spatial queries
Cloud & DevOps: AWS (CloudFormation, ECS, Lambda, SQS, S3, Aurora), Azure Durable Functions, Docker, GitHub Actions CI/CD
Testing: Jest, Vitest, Pytest, Cypress, Playwright, Testcontainers
Payments & Security: Stripe (subscriptions, Connect payouts, webhooks), Auth0, RBAC/ABAC, HMAC webhooks, idempotency, KMS

EXPERIENCE

MergeStack · Lahore, Pakistan (software services, US clients) · *Sep 2022 – Present*

Senior Software Engineer · *Sep 2025 – Present*

- Lead engineer across **four concurrent client products** (freight logistics, oil & gas AI, parametric insurance, AI sales training); own systems end to end and mentor junior engineers.
- Founding engineer on **two platforms**: wrote the first commit of an AI platform for oil & gas data and of a freight-brokerage operations platform, and lead the latter's engineering (stack, ADRs, CI/CD, AWS).
- Led the **pre-launch money and security review** for an insurance platform's October 2026 launch: hardened sign-in token verification and made payouts retry-safe.
- Designed the team's **AI-agent engineering workflow** (planner and gate-keeper agents, parallel worktree lanes, ~29 custom CI policy checks), used to build the Pedant platform in three months.

Software Engineer · *Sep 2023 – Sep 2025*

- Lead author of the **mapping and data-grid infrastructure** on an oil & gas platform; top contributor across all four services of a retail location-intelligence platform.
- Started and led a **Next.js Pages Router to App Router migration** on a 13-state e-commerce platform, including the build-time and Core Web Vitals work.

Associate Software Engineer · *Sep 2022 – Sep 2023*

- Built core features of a **two-brand, 13-state dispensary e-commerce platform** in Next.js and headless WordPress: the build that ships both brands from one codebase, the store locator and technical SEO.
- Delivered map, data-table and import features on an oil & gas mineral-rights platform in React, GraphQL and Azure Functions.

KEY PROJECTS

Pedant — *Freight-Brokerage Operations & Commission Platform · Founding Engineer · 2026 – Present*

- Replaced **1,000+ Excel sheets** with a multi-tenant platform for a US freight brokerage's loads, carriers, sales teams and commissions.
- Built bulk import for **250,000-row files**: S3 multipart upload, Parquet staging queried with DuckDB, and validate / run / undo across BullMQ queues with receipt-based revert.

- Designed a **typed rules language** (parser, type checker, traced evaluator) so commission rules are tenant configuration, and a settlement bridge that proves third-party statements reconcile **to the cent** before matching them to loads.
- Owned delivery: AWS CloudFormation (Elastic Beanstalk, ElastiCache, KMS, S3, SES) and keyless GitHub Actions deploys behind policy and OpenAPI-drift gates.

Stack: *TypeScript, React 19, TanStack, NestJS, MongoDB, Redis / BullMQ, DuckDB, Parquet, AWS CloudFormation, SSE*

Sense — *AI Platform for Oil & Gas Data and Documents · Founding Engineer · 2026 – Present*

- Sole author of a **hybrid RBAC/ABAC authorization engine** compiling roles, team grants and user overrides into one permission matrix with module-, entity-, field- and row-level access, cached in two tiers behind Redis.
- Sole author of **API-key and machine-to-machine auth**: peppered SHA-256 tokens, constant-time verification, and a dual Auth0 M2M + tenant-token scheme.
- Built an **LLM document-extraction pipeline** (OpenAI Responses API, LangChain, Python) with an HMAC-signed handoff to a sister platform, plus atomic, retry-safe **credit billing for AI** chat, agents and extraction.

Stack: *TypeScript, React 19, NestJS, Python, OpenAI, LangChain, MongoDB, SQL, Redis, Auth0, Stripe, Turborepo*

Centinel — *Parametric Power-Outage Insurance (B2B SaaS) · 2025 – 2026*

- Sole author of the **B2B Partner API**: Argon2-hashed API keys, IP allowlists, per-partner rate limits, HMAC-SHA256 webhooks with zero-downtime secret rotation and backoff retries, and request-hash idempotency that prevents duplicate purchases and payouts.
- Cut an outage sync from 1,000+ queries per request to a constant count plus a concurrently built partial index (**231 ms → 1.8 ms**), ending a recurring 100% database CPU spike.
- Led the live frontend's move from CRA to Vite, pnpm, Tailwind v4 and shadcn/ui; rebuilt a **12.7M-row** outage-data backfill (S3 → SQS FIFO → Aurora) and cut AWS spend by about **65%**.

Stack: *Python, Django REST Framework, PostgreSQL, React 19, Vite, Stripe Connect, AWS (Lambda, SQS, Aurora, Cognito, SAM)*

M1neral — *Oil & Gas Mineral-Rights Platform · 2022 – 2026*

- Lead author of the **Mapbox GL JS + deck.gl map** over wells, parcels and tracts, with custom draw modes (circle, rectangle, rotate/scale); largest contributor to the virtualised data grid used across the product.
- Built and maintained the **Azure Durable Functions** engine for bulk shapefile and CSV import (orchestrator + seven activities); co-authored the ElasticSearch query layer with automatic soft-delete exclusion.
- Built the **human-in-the-loop review UI** for AI agreement extraction; started and led the AI document workstream.

Stack: *React, TypeScript, GraphQL (Apollo), Azure Functions, MongoDB, ElasticSearch, SQL Server, Mapbox GL JS, deck.gl, Auth0*

Perigon AI — *Retail Location Intelligence Platform · 2023 – 2024*

- Top contributor across all four services; kept bulk ingestion off the request path by dispatching **AWS ECS tasks** that stream CSV into PostGIS.
- Built **viewport-bounded PostGIS queries** with geohash bucketing, a no-code deck.gl layer builder for ops teams, and 81% of a route-derived RBAC microservice.

Stack: *React, deck.gl, Google Maps API, NestJS, PostgreSQL / PostGIS, Sequelize, AWS ECS, S3*

Zen Leaf & MÜV — *Multi-State Dispensary E-Commerce · 2022 – 2024*

- Built core features of one Next.js + headless WordPress codebase serving **two brands across 13 states**: brand-switching build, store locator and timezone-aware store hours, medical/recreational menus, per-state compliance gating.
- Built technical SEO (dynamic sitemaps, robots, schema.org) and Sentry monitoring across client, server and edge; later started and led the App Router migration.

Stack: *Next.js, React, WordPress (WPGraphQL), Apollo, Tailwind CSS, Mapbox, Algolia, Sentry, Storybook*

Sales Rep AI — *RAG Sales-Training Assistant · 2025 – 2026*

- Built most of a subscription **RAG assistant**: PDF/Word ingestion, OpenAI embeddings with Pinecone retrieval, FastAPI + Chainlit app, Stripe billing on LLM usage, and OpenTelemetry tracing.

Stack: *Python, FastAPI, Chainlit, OpenAI, Pinecone, Stripe, Docker*

my-expenses — *Personal Finance & Investing Platform · Personal Product · 2025 – Present*

- Sole owner of a Next.js 16 / MongoDB platform (**47 models, ~245 API routes, ~690 test files**): FIFO / XIRR / Sharpe portfolio engine, PSX capital-gains-tax engine and Islamic-finance rules (Zakat, Khums, riba), built with agents I designed.

Stack: *Next.js 16, React 19, TypeScript, MongoDB, TanStack, Vitest, Vercel*

EDUCATION & LANGUAGES

BS Computer Science · COMSATS University, Lahore · *Sep 2018 – Jul 2022*
Languages: English (Professional) · Urdu (Native) · Punjabi (Native)
